# WAD Project

By: Daan Duijkers

Inhoud

Description

What I will be making for this project is a shopping cart where people can order products and put them in a personal file and then order them to be delivered to their home. I personally wanted to make this for a while and this is a perfect opportunity!
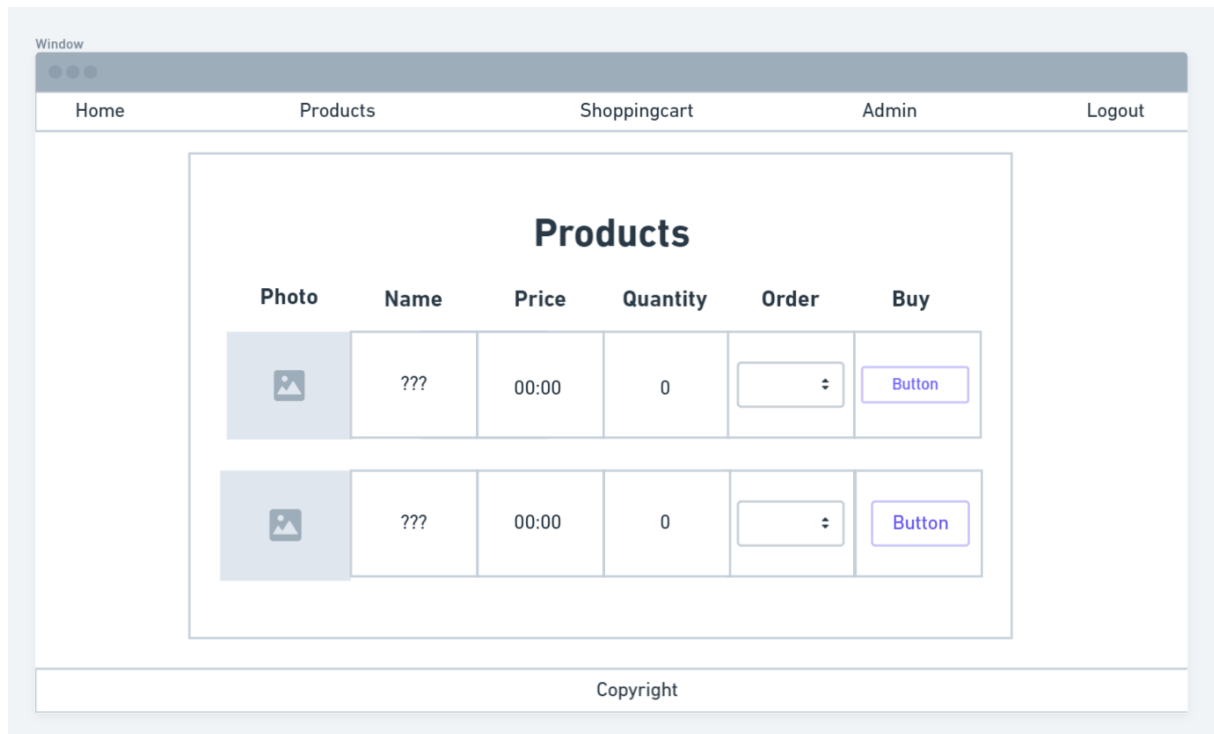

Pages

Home

The page people first arrive at upon logging in. It has no functionality besides two links to the Products and Shoppingcart pages.
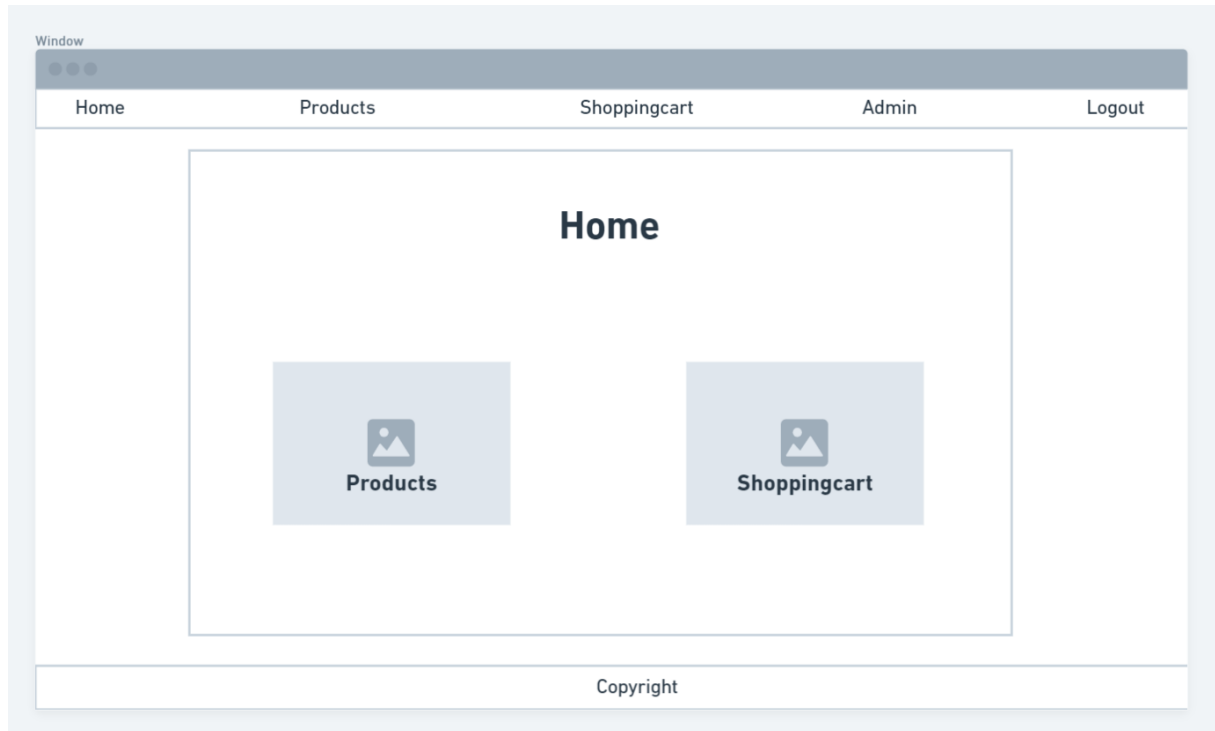

Products

The products page is where the user can take a certain amount of a selected product and put it into their shopping cart. Those with admin right will also be able to refill the product quantity and whole new products.

Shopping cart

The shopping cart is where all the products go after the user selected them to be bought.
Here they can select it buy it. Once this is done, the deal becomes unreversible!

	Home	Products	Shoppingcart	Admin	Logout

Shoppingcart

Name	Price	Quantity	Total	Buy
???	00:00	0	00:00	Button
???	00:00	0	00:00	Button
???	00:00	0	00:00	Button
???	00:00	0	00:00	Button

Copyright

Admin

A page exclusive to users with admin rights (normal users will not even be able to see the link). Here users with admin rights will be able to look up other users, promote them to admin status, and/or block them. They will also be able to make whole new accounts for users.
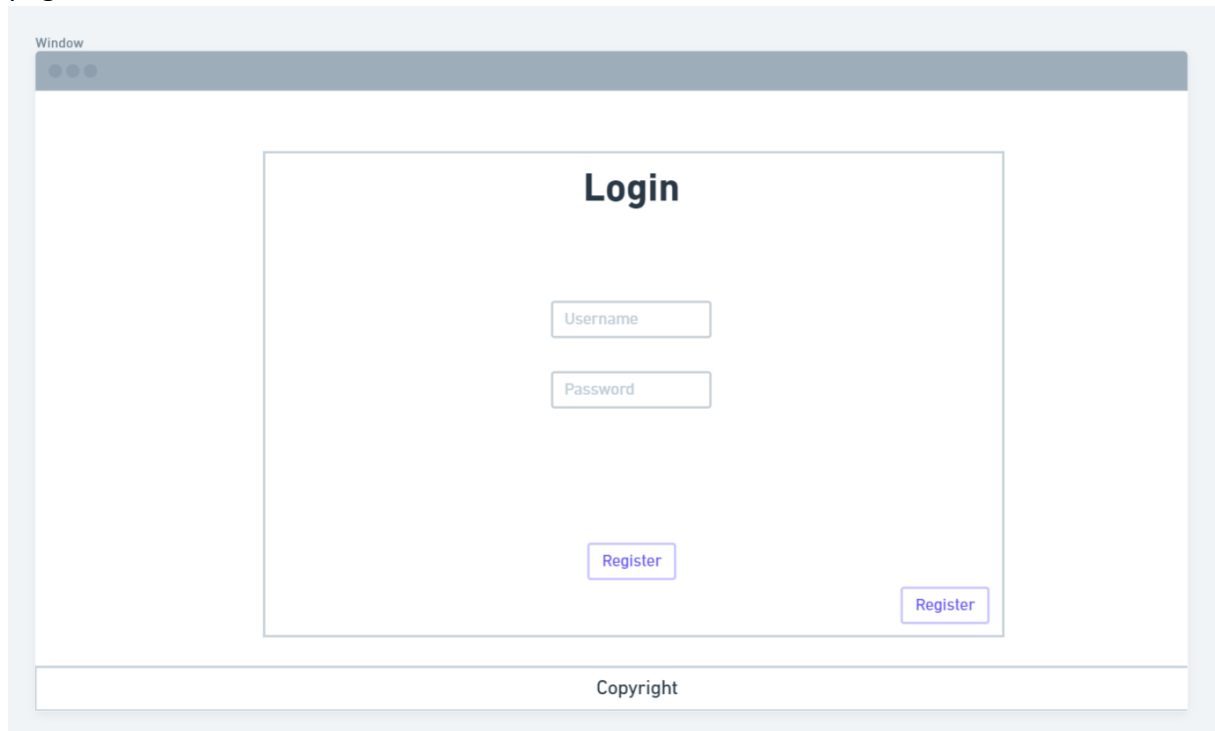

Login

The first page the user enters upon entering the application. Here, they will have to fill in their username and password. If a false password is entered they will just be send right back to the page. If they do not have an account yet, they can otherwise also do to the register page to make one.
